Summary

GSG is the first entertainment platform in possession of both digital asset trading and betting licenses. When users bet with digital assets, they are worry-free about cashing back their digital assets. A traditional betting license does not support betting with digital assets. However, GSG Super Games has gotten through it in a legal way. GSG takes full advantage of the decentralized, irrevocable, fair and equitable features and advantages of blockchain technology to realize the construction and development of new business models under the context of the great times. It is committed to building the next-generation Internet of Value and a sunrise industry that disrupts the rules of the business world, and creating a digital asset betting platform for hundreds of millions of fans around the world.

The GSG team believes that if we regard a disruption of traditional betting as our vision, see the future of blockchain decentralization technology and recognize that blockchains will become a trend in the business world, the goal at this stage is to implement pragmatic use of blockchain technology, realize a public application scenario, present the decentralized, irrevocable, fair and equitable features and advantages of blockchain technology in users' application scenarios in a true sense. We will leverage our team's strength to achieve our vision and goals with overwhelming strengths and market-proven mature products as well as 100% enthusiasm and resources.

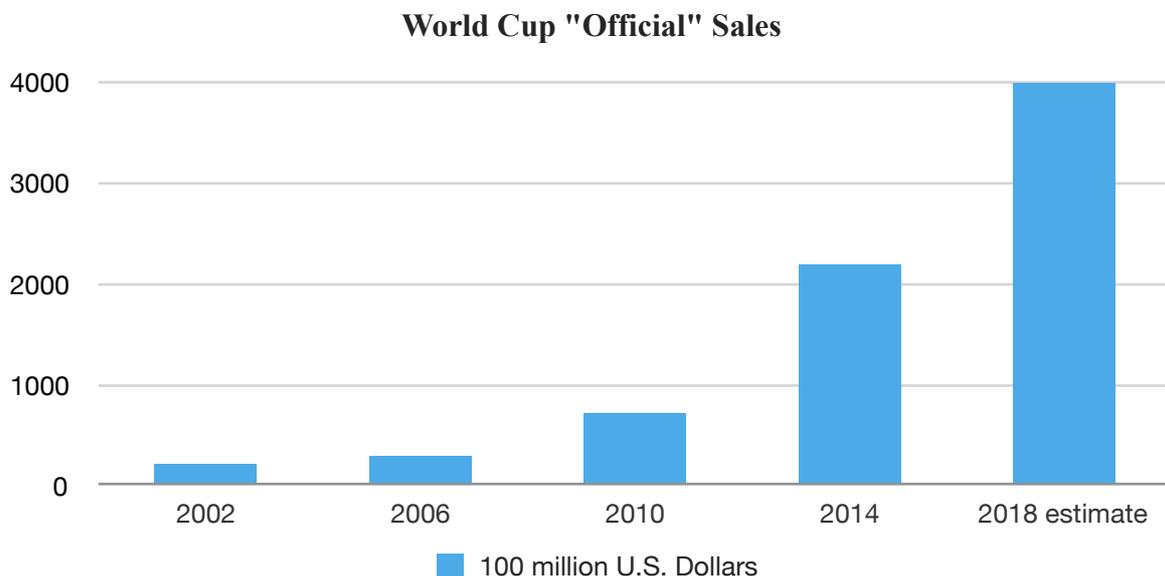

GSG brings together a core R&D team and a product operations team with years of experience in blockchain, sports events, finance, and gaming interaction. We understand that the promotion of blockchain technology in the field of traditional betting is revolutionary and also pragmatic. Therefore, empowered by blockchain technology, GSG wants to disrupt the existing traditional betting industry with trillion market size. By leveraging legal dual licenses, technology, industry resources, business model, capital management and sustainable development strategy, we will eventually build an independent business ecosystem and create world-class blockchain ecosystem products.

Part I Philosophy and market opportunity of GSG

1.1 Project background

The sports betting industry is characterized by huge market size and a wide range of events. The FIFA World Cup is the world's most honored and highest level football event. The FIFA World Cup and the Olympic Games are also known as the top two sports events in the world. It is a more influential and more-covered sports event than the Olympic Games in the world. GSG Super Games cuts into the new blockchain-based betting industry from the World Cup to share sports feast with hundreds of millions of sports fans and build a new-generation blockchain-based decentralized betting platform for sports events. **It includes, but not limited to, football, basketball, baccarat, Texas Hold'em, real gambling, horse racing, etc.**

According to statistics made by the IBAS, bets made in betting companies across the world had already approached \$ 20 billion before the semi-final of 2002 FIFA World Cup Korea/Japan; the total bets made during the 2014 Brazil World Cup exceeded \$ 220 billion, 10 times higher than that in 2002! These are just the amount from legal betting companies.

1.2 Pains and challenges in betting market

1. Legitimacy of betting platforms

We are the first legal project that has obtained dual national licenses (digital asset trading and betting licenses) from Cambodia. The Super Games platform is legally allowed to operate all categories of "online" betting. The digital asset trading license enables direct legitimate cashing with digital assets.

2. "Chain of Trust" of traditional betting platforms

Security is the key for users to select a platform. Capital security is a point of pain for the traditional betting industry. What they care about is whether money deposited in the platform is secure and whether the platform has sufficient money for payment. With no appropriate regulatory authorities, liability identification or payment guarantee, traditional centralized platforms are worrisome in terms of qualification and reputation. Such an under-regulated market is difficult to make users trust. In the chain of trust for the traditional betting industry, users trust a platform based solely on reputation, products and other non-guaranteed conditions. Such chain of trust is one-way and fragile. Platform managers do not guarantee confidence or trust, and thus build a healthy chain of trust.

3. Information transparency on traditional betting platforms

The non-transparency of traditional betting platforms makes users believe that platforms may manipulate odds maliciously. Without appropriate transparent regulation, it is difficult for users to find that the odds given by a platform are fair and just. It is not uncommon that secret operations, security breaches, arbitrage by use of information gap, absconding with money in a platform. Even in some cases, these means are one of profit models for traditional betting platforms. Therefore, such a platform may play tricks for arbitrage whenever loss occurs. It is a huge challenge how to increase user confidence in a betting platform and market transparency.

1.3 Development and value of GSG

Blockchain plays a role in trust just as that the Internet plays in information. The most lacking element over the Internet is "Trust Agreement", in order to determine each transaction is approved, real and valid. The blockchain technology can provide a basis for solving this problem, and optimize people's trust, security and privacy. When it comes to improving transparency and privacy protection, blockchain connects "trust", the most profound human need, and will bring huge social change.

With the maturity of blockchain technology nowadays, thanks to the features and advantages of the blockchain, we believe that the combination of blockchain technology with betting is one of the best scenarios of blockchain. The blockchain technology will effectively solve current pains in the betting industry, enrich and promote innovation in sports quizzes, and provide an opportunity to redefine a new-generation betting industry. Although there are a lot of blockchain betting and prediction platforms on the market nowadays, there are only a few products that can truly integrate with traditional business and reach the public. There are few products operated under successful business models.

Empowered by the blockchain technology, GSG tries to disrupt traditional centralized betting platforms. We have built a successful business model for digital asset trading + betting users + Super Games. Compared to traditional betting platforms, the blockchain technology cannot be tampered with. Its traceability can be used to build reliable and transparent decentralized betting platforms. Prize pools and betting rules are transparent and standardized. Odds cannot be controlled, thereby effectively preventing control by market makers and black-box operation. Programs are preset before quizzes so as to perform settlement automatically based on betting results, ensure the fairness of results, allocation of rewards and tamper-evident betting. GSG helps regulators in money laundering fraud and control over betting limits. It helps promote the healthy development of betting and solve the problem that nothing could be done at the government regulation level in the past as well as encourages governments to promote the standardization and transparency of the betting industry.

Part II Industry application prospects and scenarios of GSG

2.1 Global blockchain-based decentralized betting platform

Based on the above said, use of blockchain decentralization technology can solve many pains in traditional centralized betting platforms. In many blockchain scenarios, the betting platform based on digital currency created by GSG has the following six features:

1. Global betting platform

Digital currency, as the gaming chip in the platform, solves the problems in legal tender exchange and risks. As compared with regional restrictions and legal tender of traditional betting platforms, the secure, flexible and free betting experience will be a natural global betting product. In 2018, we will complete global layout and strategic layout from the perspective of betting types, languages, and partners. Globalization helps get support from more users. It will benefit from the GSG operations team, whose members have ever engaged in overseas operations and business promotion. They have successful hands-on experience in overseas user acquisition, business promotion, and local resources.

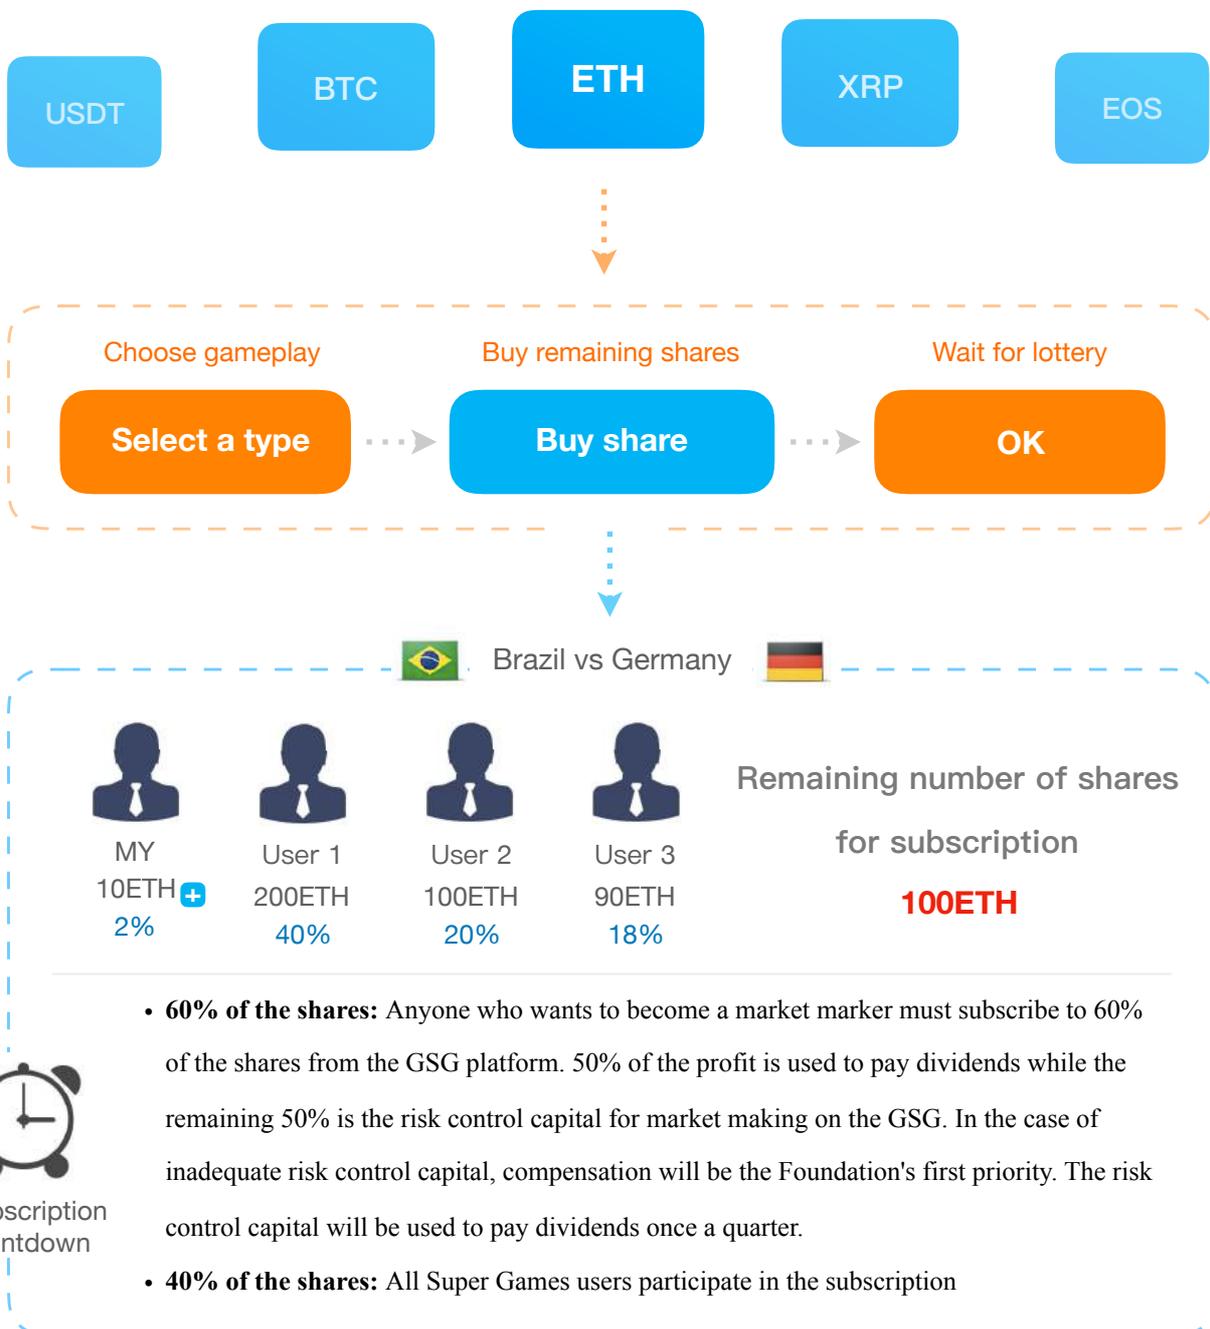

Language of Preferred Countries for Global Operation

English Traditional Chinese Spanish French Portuguese Russian language Arabic Japanese

2. Users are free to participate in "joint market making"

Users registered in the Super Games platform can participate as market makers in matches, and select any match based on their own preferences. The final information created is recorded in the platform to ensure authenticity and transparency.

Super Games decentralized "joint market making"

Advantages of joint market making:

- Solve the problem that user betting is dispersed when a match is created by several people.
- Joint market making not only improves compensation capabilities, but also provides users with different scenario experience.
- Joint market making can effectively share risks borne by individual users.

3. A wide range of interesting betting products

GSG offers betting content covering all types of large-scale popular matches. The covered betting fields **include, but not limited to, football, basketball, baccarat, Texas Hold'em, blackjack, real gambling, horse racing, etc.** We will continue to explore new areas, new betting types and scenarios. GSG gathers professionals in sports events and gaming industries. It creates products using the Internet, focuses on meeting user needs, and has leading-edge advantages in terms of product forms, betting scenarios and product experience.

4. Secure, open, fair and transparent betting

In the future, all bets will be recorded in a blockchain. It eliminates the possibility of data tampering and secret operations, and handles settlement automatically, conducive to granting users with maximal returns.

5. Create high-level online betting events

Super Games will continue exploring the betting industry, and build large-scale online betting events around brand operation and promotion. You can participate directly even if you are not a sports enthusiast. Individual and team matches will jointly pursue high-value digital currency rewards. By creating high-level betting events and providing competitive, user-friendly product experience, it will be favored by users in the market segment. It will attract both online and offline users and build a betting ecosystem. It will be disruptive innovation for improving closed loop operation of the ecosystem. In the evolution of Super Games products, we will continue to explore larger pattern, and lead the blockchain-based betting industry.

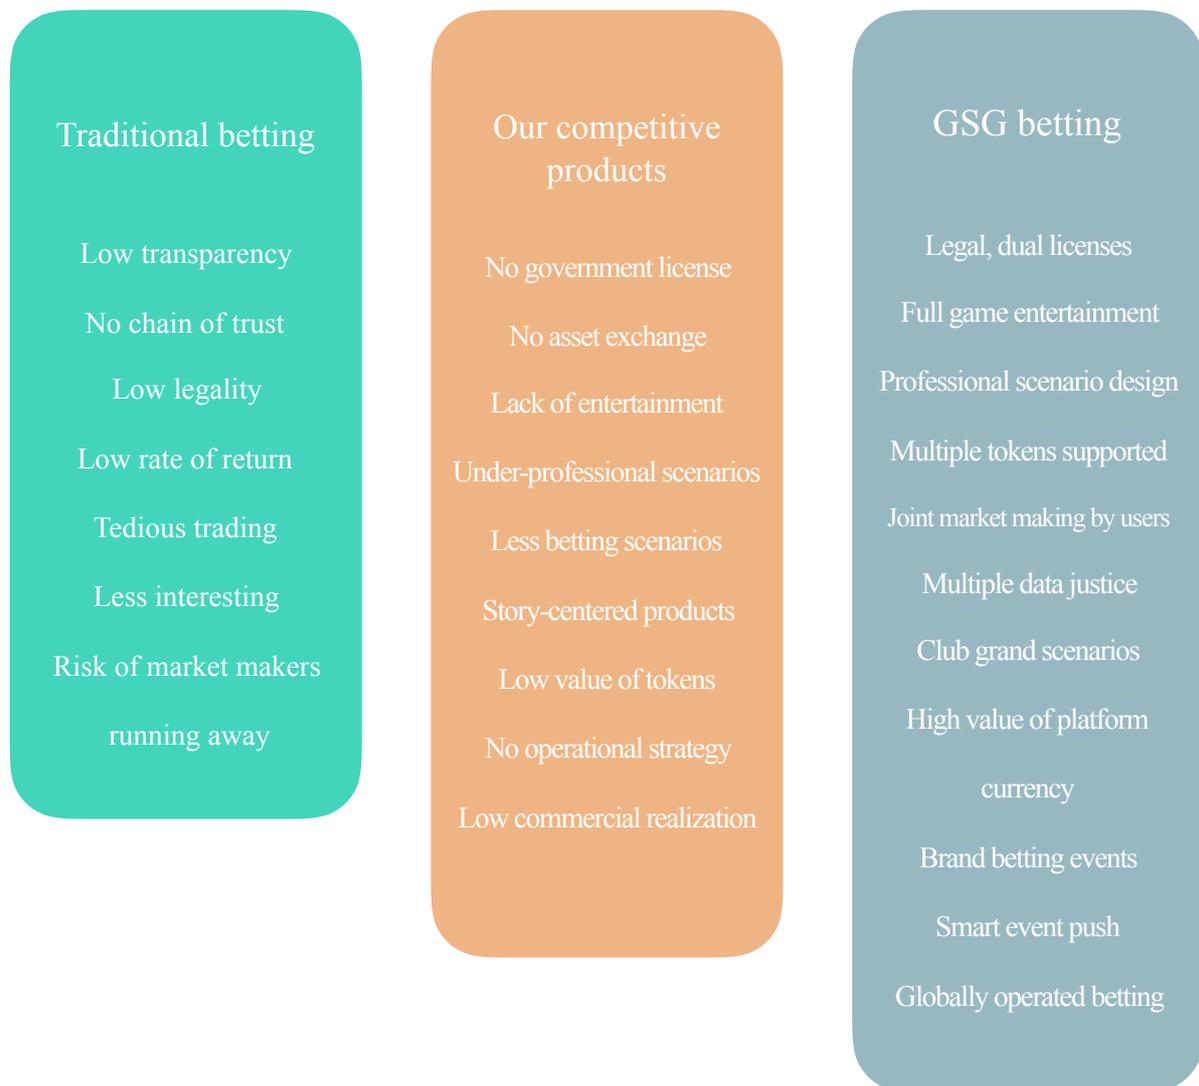

6. Smarter match information recommendations

With the optimization of the Super Games platform and growing number of users, users' habits and portraits will become diversified. More useful data will be produced and used to improve product experience and recommend appropriate events and betting contents for different users.

2.2 Super Games new product model comparison

Betting products around the blockchain technology have sprung up. GSG has pushed betting to a new level. The World Cup has brought great opportunities to the betting industry for effective promotion of user habits and industry awareness. It can expand market demand, but also help improve overall level of the blockchain-based betting industry.

We will no longer continue to pursue simple extensive growth markets, but pay more attention to quality and business efficiency enhancement, and promote the healthy development and innovation of blockchain product application scenarios.

2.3 Super Games shared business solutions

Our world has become a world of sharing. Everyone is enjoying "dividends" brought by sharing. Thanks to the technological revolution brought by blockchain, we are fortunate to live in the wave of revolutionary disruption. In layman's terms, it is "good timing, geographical convenience and good human relations". The business model built up based on blockchain is still in the dawn of the blockchain era. However, the development trend is sweeping us and decentralized products are evolving. In the past, we can interpret blockchain as an emerging technology, but nowadays, everyone can become a producer of decentralized contents. A new form of social element is an endless stream of new products for the society. With more and more users participating and the power becoming stronger and stronger, the blockchain industry will eventually usher in a "nuclear fusion".

A new era is coming. This will be an era when sharing is encouraged and platforms are rising. The era of relying on a single product to win users has passed. The traditional thinking of channels as the king is no longer popular. In the new era, to carry these burdens is equivalent to equip Boeing 787 with a tractor motor which cannot fly. How to cast a platform for more partners to make creations together and for users to choose freely is the issue that has been considered by the GSG team. It is a "trial and error" process where open mind is needed to welcome change. Now we have some experience. We believe this is the right path. This test is worth our breathless, reverent, and whole-heartedly work. With digital currency as the core, the GSG platform embraces blockchain tokens in the whole platform, gives more power and commercial space to the operation of digital currency, shares resources, creates large pattern, and will achieve win-win in the future.

Super Games Business Solutions

The forms of cooperation are flexible and diverse. Based on the Super Games platform, there will be more imagination and creation space. As more and more platforms join the Super Game, our business solutions will become smarter. We have fulfilled some platform cooperation cases.

2.4 Super Games cooperation cases

Collaboration results are accidentally good. Partners have opted not to disclose operational data in the White Paper, and we respect their wishes. Welcome to participate!

2.5 Technical architecture and realization

1. Smart contract

The next version currently under development will use smart contracts on Ethereum. The main web3.0 architecture consisting of Ethereum chains, smart contracts and sub-protocols provides Super Games with distributed assets issuance and trading infrastructure without need of trust or license. By use of smart contracts, we can realize assets issuance, betting applications, trade locking, decentralized exchange and other applications. Betting data services on our smart contracts are inspired by Oraclize contract calling. Since we are a comprehensive betting platform, we will have a master entrance to contracts, under which smart contract services for each match are established and classified. Smart contracts for each betting are independent with each other. They are not only clear in logic, but also easy for development and maintenance.

2. Voting mechanism

Super Games adopts the DPOS consensus mechanism. There are a total of 10 accounting nodes. Each block is generated by the 10 most voted nodes at that time, and an accounting node obtains all trading fees in its accounting block. Once a user has his GSG locked, he has appropriate votes. Each vote can be given to 10 candidates. By locking his or her own GSG, a user can obtain appropriate interest income. If there is any change in the number of votes in a user account, his or her interest will be automatically credited.

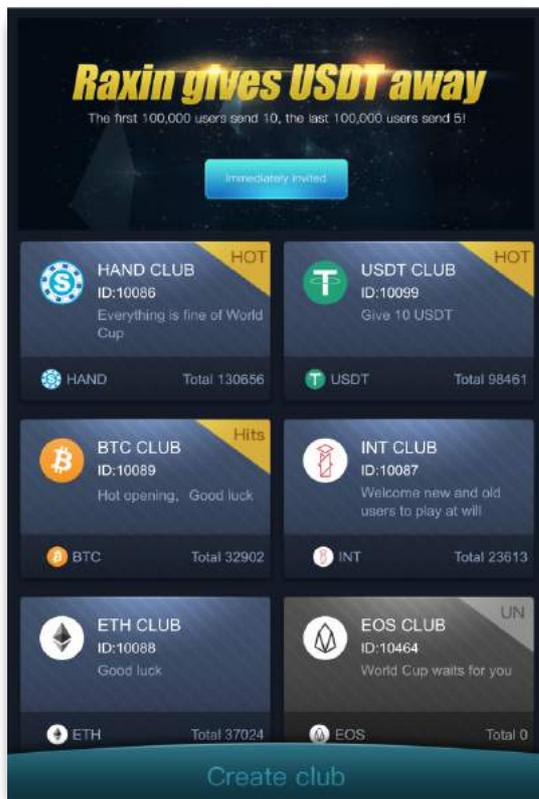

3. Super Games applications

The distributed betting nodes provided by Ethereum LES protocol is an Ethereum node running under a mobile terminal rather than a browser-based application or standalone desktop application. Super Games applications run the geth & web3.0 JS framework on smart phones by use of LES, thus providing very powerful yet secure functions.

Users can create Event, create Market based on the Event of interest and set Event & Market description and meta-data, conduct faster query of Event & Market, lottery and event information, buy, sell and accept the won money for different Markets. Users' digital currency for betting will never get lost or tampered with. Digital currency involved in betting is all frozen in smart contracts. To enhance user experience, we conduct real-time check at the front end to raise the success rate of bets. Once betting for an event ends, its betting sponsor will announce final results by contracts. They are official results. Smart contracts distribute rewards among bet winners automatically based on final results.

4. All platforms supported

We have launched Super Games Android and iOS applications as well as a mobile web version. In a truly meaningful sense, it has been operating in the all-mobile terminals. All Super Games mobile products are integrated with a light wallet, where Super Games transfer and withdrawal features are incorporated. A digital currency exchange will be opened later!

Automatic switching among multiple languages

Part III Digital asset trading and Super Games

3.1 Legalization of digital asset trading

The attitudes of countries towards blockchain digital assets changing from prohibition to recognition and legalization indicate that blockchain assets are future development trends, and that digital asset licenses are exactly the needs and innovations of the financial industry currently and are necessary for the Super Games betting and entertainment platform. When users bet with digital assets, they are worry-free about cashing back their digital assets. With dual licenses at hand, Super Games has built a perfect and legitimate closed-loop solution.

A perfect closed-loop business with dual licenses

3.2 Cooperation in global legal betting markets

Super Games are not only developing betting products, but also cooperate with legally licensed companies, legal chess and game makers, and other resources to connect many high-quality independent betting products with the Super Games entertainment platform.

3.3 Platform profit models

As a blockchain-based digital asset betting and entertainment platform, our revenue and profit mainly come from service fees drawn from users participating in the platform. Now the project is still in the early stage of development, and more profit models need to be explored.

Profit models of Super Games betting and entertainment platform	
Commission withdrawal	A certain percentage of commissions are drawn from all betting.
Entry of tokens	Charge some platform entry fees for all or some betting products and tokens to join clubs.
Product revenue	Revenue obtained from betting products we develop and operate.
Other income	Other income from output and extension of various resources.

Estimates based on 1ETH=\$600 (May 2018)

There are about 400 million betting users and about 20 million active users per day in the world;

- Ordinary users (single bet <0.5 ETH): about 15 million.
- Intermediate users (single bet <10 EHT): about 4.8 million
- Whale users (single bet >50 ETH): about 200,000

It is estimated that by the end of 2019, Super Games will have active paying users:

- 10,000 mid-to-high end users per day worldwide: $10,000 * 5\text{ETH} * 2\% * 30 = 30,000 \text{ETH/month}$
- 100,000 ordinary users per day worldwide: $100,000 * 0.2\text{ETH} * 2\% * 30 = 12,000 \text{ETH/month}$
- Achieve monthly revenue worldwide of 42,000ETH.

Part IV Platform planning and outlook

4.1 Core value of GSG

GSG is short for Global Super Games. GSG is not the betting chip for Super Game. Any other token can be voted for being online in the Super Games entertainment platform using GSG Tokens. Users can use value-added services and product functions on the Super Games platform by consuming GSG tokens.

1. Vote for making other tokens online with GSG tokens

The voting for token launch is reviewed by the GSG review team. Users vote on whether the project can be online in the Super Games platform. Votes submitted by users are returned within 24 hours regardless of their success.

2. GSG as bonus for users' bet

All 270 million GSGs in the community will be cashed back to Super Game betting participants, i.e. $\text{actual value of betting tokens} \times 1\% \div \text{current market price of GSG}$ (value of bet incentive GSG = $\text{actual total value of betting token} \times \text{one thousandth}$). When the unit price of GSG is $<0.1\text{USD}$, we will keep it constant at 0.1USD , and the cash back time is the next morning.

For example: bet with 1ETH. Unit price of EHT is 500USD and that of GSG is 0.1USD.

GSG cash back: $1 \times 500 \times 1\% \div 0.1 = 5\text{GSG}$

3. Super Games platform application privileges

Super Games will customize some scenarios and functions to meet user needs and enhance the value of GSG in Super Games. For example: Users with VIP privileges can view betting records and win or lose of another user, and hide their own data with GSG rights. Market makers are allowed to get more exposure. GSG can be used for broadcasting in the whole platform, so that your sports betting can attract more attention.

4. Dividends shared on the platform

All locked participants in GSG are entitled to platform dividends whose amount is 100% of the profit from the platform club's operating revenue. Our principle of distributing dividends is: what is profit is what is distributed (WIPIWID), and distribution is based on to the lock ratio. For example, the income of a club includes BTC, ETH, USDT, etc., and then the distributed are also BTC, ETH, USDT, etc. Rules for dividend distribution rules can be seen in the Super Games. They are fair and open, so that every user participates in platform construction and development and build a Super Games betting ecosystem.

Example:

Club	Profit on Some Day	Number of Lock-In Days	Your Locked	% of the Locked	Your Dividends
BTC Club	100BTC	1 day	1 million GSG	0.1%	0.1 BTC
ETH Club	1,000ETH	1 day			1 ETH
USDT Club	1,000,000USDT	1 day			1,000 USDT
.....More					

The specific launch time, profit, lock-in days, and dividend distribution method are subject to the notice released on the Super Games platform.

4.2 Platform development plan and schedule

As the GSG team constantly expanded, the schedule may be advanced or adjusted as necessary

4.3 Construction of Blockchain Industry Ecosystem in the Future

We will build GSG Chain to effectively reduce product operation costs and provide a highly available and scalable blockchain application infrastructure platform. Super Games will be open to all developers. Through Super Games, everyone can realize their own business inspirations and product operations on Super Games, and launch their own applications.

At the early stage, we will focus on three applications to explore markets: decentralized betting application, decentralized asset trading application, decentralized foreign exchange application. With them as a fulcrum, upper blockchain applications will be improved gradually.

The product system will provide a development platform for different systems and different users, not only on the client side. The team will continue to develop and provide mobile services, including mobile wallets, mobile smart contract applications, platform online voting and other services. Only by realizing mobile blockchain service and changing existing betting APP markets and business models, can ordinary Internet users benefit most so as to promote the implementation and development of blockchain technology in the world.

Part V Core team and investors

5.1 Core team members

Led by Ellison, GSG's core team has extensive experience in blockchain market and betting.

Ellison - CEO

Ellison, a Chinese American, moved to the United States with his family when he was a child. He graduated with a major in finance. He once worked for the Blackstone Group, and has extensive experience in financial asset management and blockchain market. He has ever invested in Internet startups and achieved financial freedom. Ellison and other team members created the Super Games in 2017, and launched it in May 2018.

Jessica Rex - CTO

10+ years of experience in the game industry; in charge of game team formation and project development, technology management, platform strategy planning.

Jack Koo - COO

Chief Operating Officer

Expert having 12 years of Internet operations, involved in media operations, entertainment investment, betting projects, chess and card games; led a global team of 200 people. He will develop long-term business strategy for Super Games, and coordinate global operations.

Aaron K. - Actuarial Specialist

Super Games Betting Actuarial Expert

Worked at Allianz Insurance in the United States and worked at William Hill for three years. William Hill is Europe's most prestigious betting company and a flagship company in the world's betting industry.

Paul Kunas - Architect

Chief architect

Monitor transactions and secure user assets to ensure their security and efficiency. Focus on reducing system complexity, encryption and security of sensitive data. Worked at Palantir, a Silicon Valley company focused on big data security analytics, with large-scale, high-performance systems and customers like NSA, FBI, and CIA.

Keith Cheung - Core R&D

Chief O&M engineer

With 6 years of experience in an online betting company in Macau, he will build an efficient, highly reliable O&M system for Super Games, solve business O&M problems by use of advanced and forward-looking technology, and guarantee global steady operation of Super Games.

Abe Yeung - Product Director

7 years of experience in Internet products. Senior lottery product manager, an expert in competition lottery, HF lottery, and sports lottery.

5.2 Investors

Names not listed in order

<p>Roger K</p> <p>Cambodian casino operator</p>	<p>Dong Lee</p> <p>USDT OTC Exchange CEO</p>
--	---

NewMargin
VENTURES

NewMargin Capital, currently VC management leader in China. Its primary goal is to help businesses grow into world-class companies. NewMargin's investment cases include Sina Sina, China Netcom, Hanwang Technology, Douban, Cool Dog, Thunder, etc.

无穹资本
Everest capital

It have also invested in Yunchang Technology, Hongyu Tianrun, Rage Comic, Media Doing, Llllan, fun.tv, fast4ward, Innjia, SFA, Chinapex

安晟资本
ANSH CAPITAL

Ansheng Capital focuses on blockchain ecosystem investment and has invested in MSC, Sopay, Liveme, Thunder, Node Exchange, FANX, LOTS, etc

A G 娱乐
CAMBODIA

OU FUND

Investment management

KELLE

Part VI GSG International Foundation

6.1 Establishment of the Foundation

The Foundation is established to ensure product O&M, technical R&D of blockchain, business development, team management needs. The Foundation contains a User Protection Fund. At present, our products have been launched. We have a team of nearly 30 people for blockchain research, technology, products, operations and business. With the development of products and increasing market share of applications, GSG will adopt an open attitude to attract more talents who are willing to contribute to the community. For this reason, the team has set up the GSG International Foundation in Cambodia to manage and satisfy project development needs.

6.2 Functions of the Foundation

In the project development, the GSG Foundation is responsible for:

1. Day-to-day project operation management.
2. Blockchain technology research direction in each period as well as long-term strategic development plan.
3. HR-related work.
4. Incentive maintenance, security and management of the GSG community.
5. Appropriate application of funds and digital tokens raised for Super Games projects.
6. Present project progress and financial disclosure to the public periodically.

Part VII GSG Token issuance plan

7.1 Total GSG tokens issued

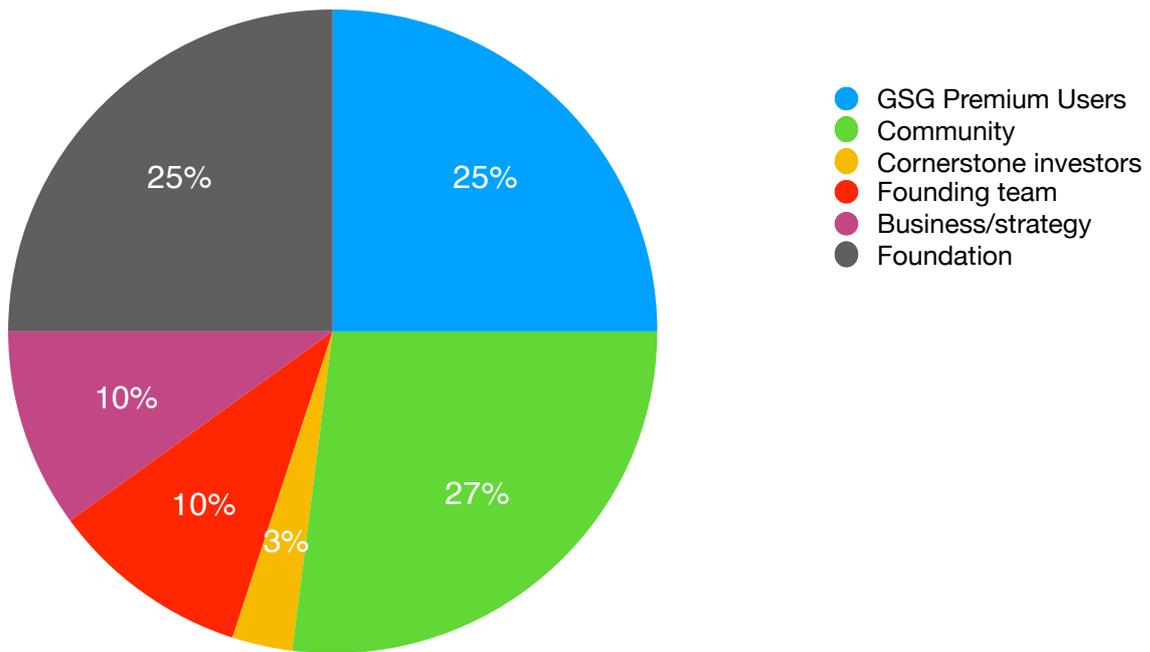

The GSG Foundation has issued 1 billion GSG tokens based on the Ethereum ERC20 standard and will never issue more tokens.

7.2 GSG issuance and distribution plan

Total GSG tokens issued: 1,000,000,000

Floating: 650,000,000 (65%)

Distribution Plan (1 billion)			
Name	Proportion	Quantity	Note
GSG Premium User	25%	250,000,000	Platform incentive plan, GSG premium users
Community	27%	270,000,000	Community building incentives
Cornerstone investors	3%	30,000,000	Locked for 6 months
Founding team	10%	100,000,000	Locked for 4 years, 25% released every year after one year
Business/strategy	10%	100,000,000	Financing from other institutions (brand building, cooperation, listed in exchanges)
Foundation	25%	250,000,000	Financial disclosure, user property protection

GSG official website: <https://www.gsgone.com>

Super Games: <https://www.gsg.one>

7.3 Disclaimer

Nothing in this White Paper constitutes legal, financial, commercial or tax advice, and you should consult your own legal, financial, tax or other professional advisers before participating in any activities related hereto. Neither GSG, project team members (GSG team) on any Super Games platform or working for any related projects, nor any third party service provider shall be liable for any of your damages or losses, direct or indirect, due to access hereto, to materials provided by the Foundation, to <https://www.gsgone.com/> or any other publication from the Foundation.

All contributions will be used for the purpose of the Foundation, including, but not limited to, improving user experience, promoting community improvement and positive development, updating, improving and open smart contract match data interfaces to help overall development of the industry, conducting in-depth research and design of the blockchain-based betting market, organizing R&D and exploring the forms of betting products under the next-generation blockchain.

This White Paper is for providing information only. It does not constitute a prospectus, a documented offer, any securities offer or offer of goods or assets for sale. The information below may neither be exhaustive, nor mean any elements of any contractual relationship. Accuracy or completeness of such information is not guaranteed. It is neither possible nor willing to provide any representation, warranty or promise for the accuracy or completeness thereof. In the event that this White Paper contains information obtained from third parties, the Foundation and the GSG team has not independently verify the accuracy or completeness of such information. Accuracy or completeness of such information is not guaranteed. It is neither possible nor willing to provide any representation, warranty or promise for the accuracy or completeness thereof.

This White Paper does not constitute an offer by the Foundation or the GSG team to sell any GSG (platform currency). The whole or any part of it and the facts stated herein do not form the basis of, and must not be linked to, any contract or investment decision.

Nothing contained herein is not or construed as a commitment, representation or promise to future performance of the platform. Any agreement by and between the Foundation (or its affiliates) and you to purchase or sell GSG is only subject to separate terms and conditions of the agreement.

The Foundation and the GSG team do not, nor will they make any representations, warranties or promises to any entity or individual, and hereby disclaim any responsibility. Potential buyers of GSG shall carefully consider and evaluate all risks and uncertainties (including financial/legal risks and uncertainties) associated with GSG token sales, the Foundation, and the GSG team.

By accessing and reading this White Paper or any part hereof, you make the following representations and warranties to the Foundation and the GSG team:

- (A) You acknowledge, understand and agree that GSG may be worthless, there are no representations or warranties for its value or liquidity, and GSG is not used for speculative investment;
- (B) You are not making any decision to buy any GSG based on any statement herein;
- (C) You will bear costs on your own to ensure compliance with all legal, regulatory requirements and restrictions (as appropriate) applicable to you;
- (D) You acknowledge, understand and agree that you have no qualifications to buy GSG if you are a citizen, resident or green card holder of the United States of America, a citizen or resident of the People's Republic of China, or if your country's national policy does not support digital currency transactions.
